

The 4<sup>th</sup> General meeting of JASE-W was held on 14<sup>th</sup> June, 2011 at Keidanren Kaikan

### Remarks from Mr. Yonekura, Chairman of JASE-W

Concern about energy security, in addition to global environmental problem, is growing worldwide. Advanced energy conservation and renewable energy technologies of Japan will play an important role to solve these problems and foreign countries have great hope for Japanese technologies and experiences in these fields. Domestically, we are struggling to recover from damages suffered by the recent great earthquake. We, however, should not reduce our efforts to solve global environmental and energy problems, and we must keep going our activities to promote energy conservation and renewable energy business overseas steadfastly. I believe that our activities will support revitalization of Japanese economy and recovery from the natural disaster.

Mr. Hosono, Director-General, Agency for Natural Resources and Energy

### Message from Mr. Sadoshima, Director-General, International Corporation Bureau, Ministry of Foreign Affairs

After the disaster, we realized our country's position in the world again by watching many supports for our restoration from various foreign countries. So far, MOFA has cooperated with JASE-W to make our best efforts to promote the Japanese technologies all over the world. We will continue to do so in the coming years as well. Please make the most use of specialists on infrastructure systems appointed to our embassies in 49 countries, 56 Japanese diplomatic missions, JICA to serve your purposes.
